

Figure 1. *Herschel* three colour images of the locations of all supernova remnants in our sample. Colours are red = $250\,\mu\text{m}$, green = $160\,\mu\text{m}$, and blue = $70\,\mu\text{m}$. Purple crosses indicate the source radio centre from Green (2014) and cyan crosses indicate the X-ray centre. Magenta diamonds indicate the location of 1720 MHz OH masers. The border colour indicates the associated detection level in this study, as given in Table 1, where green = level 1, orange = level 2, magenta = level 3, grey = level 4, and black = unstudied. In some panels dashed magenta circles and white arrows indicate particular FIR dust emission features associated with the SNR. X-ray contours are overlaid onto the images of G11.2–0.3 and G15.9+0.2, MIPS contours are overlaid onto G14.1–0.1, and radio contours are overlaid onto the image of G14.3+0.1. MNRAS **000**, 000–000 (0000)

Figure 1 – continued Radio 20 cm contours are overlaid onto the image of G20.4+0.1, G31.9+0.0, and G33.2–0.6. X-ray contours are overlaid onto the images of G21.5–0.9, G27.4+0.0, G29.7–0.3, and G33.3+0.1.

Figure 1 – continued Radio contours are overlaid onto the images of G39.2–0.3, G43.3–0.2, G336.7+0.5. X-ray contours are overlaid onto the image of G332.4–0.4

Figure 1 – continued MIPS contours are overlaid onto the image of G344.7–0.1 and X-ray contours are overlaid onto the image of G349.7+0.2.

Figure 2. First column: *Herschel* three colour images where colours are red = 250 μm, green = 160 μm, and blue = 70 μm. Overlaid contours are X-ray unless indicated. Second column: *Spitzer* IRAC four colour images. Third column: *Spitzer* MIPS 24 μm images. Fourth column: Radio images: VLA 20 cm where $l < 48.5^\circ$, CGPS 1420 MHz in the range $52 < l < 192^\circ$, and MOST 0.843 GHz where $l > 255^\circ$. The border colour indicates the associated detection level as given in Table 1, where green = level 1, orange = level 2, magenta = level 3, grey = level 4, and black = unstudied. This is given for this study in the first column, R06 in the second column, and PG11 in the third column. In some panels dashed magenta circles and white arrows indicate particular FIR dust emission features associated with the SNR. X-ray contours are overlaid onto the *Herschel* image of G11.2-0.3.

Figure 2 – continued MIPS 24 μm contours are overlaid onto the *Herschel* image of G14.1–0.1.

Figure 2 – continued Radio contours are overlaid onto the *Herschel* image of G14.3+0.1 and X-ray contours onto the *Herschel* image of G15.9+0.2.

Figure 2 – continued

Figure 2 – continued X-ray contours are overlaid onto the *Herschel* image of G27.4+0.0.

Figure 2 – continued X-ray contours are overlaid onto the *Herschel* image of G29.7–0.3 and radio contours onto the *Herschel* image of G31.9–0.0.

Figure 2 – continued Radio contours are overlaid onto the *Herschel* image of G33.2–0.6, X-ray contours onto the *Herschel* image of G33.6+0.1.

Figure 2 – continued Radio contours are overlaid onto the *Herschel* images of G39.2–0.3 and G43.3–0.2.

Figure 2 – continued Radio contours are overlaid onto the *Herschel* images of G296.8–0.3, G304.6+0.1, and G310.6–0.3.

Figure 2 – continued Radio contours are overlaid onto the *Herschel* image of G310.8–0.4 and X-ray contours are overlaid onto the *Herschel* image of G332.4–0.4.

Figure 2 – continued Radio contours are overlaid onto the *Herschel* images of G336.7+0.5, G337.2–0.7, G340.4+0.4, and G340.6+0.3.

Figure 2 – continued Radio contours are overlaid onto the images of G342.0–0.2, G345.7–0.2, and G346.6–0.2. MIPS 24 μ m contours are overlaid onto the *Herschel* image of G344.7–0.1.

Figure 2 – continued Radio contours are overlaid onto the images of G348.5–0.0, G348.5+0.1, and G349.2–0.1.

Figure 2 – continued X-ray contours are overlaid onto the *Herschel* image of G349.7+0.2.
